The Respiratory System takes in the oxygen that the circulatory system picks up and transports to the cells. Explain the gas exchange process that occurs between the alveoli and the capillaries. Oxygen us brought into the lungs, diffuses into the capillaries around the alveoli. The oxygen enters the blood.

of carbon in the blood or decreased amount of oxygen.

anatomy ii respiratory system packet Flashcards ... - Quizlet
When air comes into the respiratory system, it first enters the mouth or nose and then passes through many structures before oxygen is exchanged with carbon dioxide. Put the following words in the correct order, starting with the first structure through which air passes after it enters your mouth or nose.

Respiratory System Review Packet Flashcards | Quizlet
cells and in eliminating carbon dioxide from the body.

Acces PDF Respiratory System Packet Answer

The respiratory system is responsible for gas exchange between the pulmonary blood and the external environment (that is, external respiration). The respiratory system also plays an important role in maintaining the acid-base balance of the blood.

Chapter 7:10 respiratory system Flashcards | Quizlet
Because no gas exchange occurs except in the respiratory zone, particularly in the alveoli. Exchange of gases across the respiratory membrane in the lungs. Exchange of respiratory gases between the blood of the systemic capillaries and the tissue cells of the body.
